# TEDS-M Final Report to IEA General Assembly 

October 5, 2010
Gaborone, Botswana
$\frac{\text { MCHICAN STATE }}{\text { UN IVIRSITY }}$

## TEDS-M Main Research Questions

What are the policies that support prospective primary and secondary teachers' achieved level of mathematics and related teaching knowledge?

What learning opportunities in mathematics available to prospective primary and secondary teachers allow them to attain such knowledge?

What is the level and depth of the mathematics and related teaching knowledge attained by prospective primary and secondary teachers at the end of their pre-service teacher education?

Comparative question: How do these policies, opportunities to learn and knowledge vary across countries?

## Four Surveys

- Teacher Education Institutions \& Programs
- Teacher Educators
- Primary Future Teachers
- Secondary Future Teachers
- Background
- Opportunities to learn
- Beliefs
- Assessments of knowledge
- Mathematics Content
- University level
- School level
- Mathematics Pedagogical Content

## General Types of Samples

- Full censuses in Botswana, Georgia, Norway, Oman, Singapore, and Thailand.
- Census of institutions; samples of educators and/ or future teachers, in Canada, Chile, Malaysia, Poland, and Switzerland; Chinese Taipei \& Germany (samples of future teachers).
- Samples of institutions, educators and future teachers in Philippines, Russian Federation, Spain, and the USA; Germany \& Chinese Taipei (samples of educators).

## $+$ <br> $\div$ $\square$

## 17 Countries Participating

| Botswana | Norway | Spain |
| :--- | :--- | :--- |
| Canada | Oman | Switzerland |
| Chile | Philippines | Chinese |
| Georgia | Poland | Taipei |
| Germany | Russia | Thailand |
| Malaysia | Singapore | USA |
| $\bullet$ |  | (a) |

## TEDS-M Collected Data 2008-09:

- 15,163 Primary Future Teachers
- 9, 389 Secondary Future Teachers
- 500 institutions which included
- 451 units preparing future primary teachers, and
- 339 units preparing future secondary teachers
- 4837 Teacher Educators

## Sampling Adjudication Criteria

- Reporting without any annotation
- full coverage of the target population (100\%)
- exclusion rate was below 5\%
- Reporting with annotation because of low participation rates
- combined participation rate below 100\% but above 60\%
- exclusion rate exceeded 5\%
- Reporting together with other countries not advisable
- combined participation rate below 60\% but above 30\%
- Unacceptable (not reported)
- combined participation rate below 30\%

## TEDS-M Participation Rates

| Country | TEDS-M Participation Rates Summary |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Institution Participation Rate $\mathrm{PPR}_{\text {-wgt }}$ (\%) | Educators <br> Combined Participation Rate $\mathrm{CPR}_{\mathrm{E}-\text { wst }}$ (\%) | Future Primary Teachers Combined Participation Rate CPR P-wgt (\%) | Future Secondary Teachers Combined Participation Rate CPRs-wgt (\%) |
| Botswana | 100 | 98 | 86 | 88 |
| Canada | 47 | 26 | 5 | 20 |
| Chile | 88 | 54 | 68 | 64 |
| Chinese Taipei | 100 | 96 | 90 | 97 |
| Georgia | 100 | 98 | 77 | 67 |
| Germany | 100 | 55 | 76 | 76 |
| Malaysia | 57 | 53 | 93 | 75 |
| Norway | 96 | NA | 75 | 64 |
| Oman | 100 | 84 | NA | 93 |
| Philippines | 80 | 81 | 75 | 79 |
| Poland | 86 | 67 | 67 | 69 |
| Russian Federation | 91 | 91 | 91 | 92 |
| Singapore | 100 | 85 | 90 | 91 |
| Spain | 97 | 86 | 76 | NA |
| Switzerland (g) | 94 | 52 | 76 | 81 |
| Thailand | 96 | 88 | 97 | 96 |
| USA | 83 | 15 | 72 | 60 |

## Sampling Adjudication Summary

|  | No annotations <br> \# Countries | Annotations <br> \# Countries | Not reported <br> \# Countries |
| :--- | :---: | :---: | :---: |
| Institutions | 9 | 5 | 3 |
| Educators | 7 | 3 | 7 |
| Primary Future <br> Teachers | 10 | 5 | 1 |
| Secondary Future <br> Teachers | 9 | 6 | 1 |

## Program Groups for Cross-National Comparison

- Primary Program Groupings
- Generalists no higher than Grade 4
- Generalists, no higher than Grade 6
- Generalists, no higher than Grade 10
- Mathematics specialists for primary school
- Secondary Program Groupings
- Lower secondary, no higher than Grade 10
- Lower and upper secondary (Grade 11 and above)

# Highlights From Background on 

 Institutions, Educators and Future Teachers[Chapter 4]
$+\div$

## MAI N CHARACTERISTICS OF INSTITUTIONS, TEACHER EDUCATORS AND FUTURE TEACHERS

- Institutional Program Structures and Characteristics (e.g., route, level, and length of programs, programs' selectivity in mathematics, curricular strategy, graduation standards and guidelines)
- Teacher Educator Background and Characteristics (e.g., gender, qualifications in mathematics, mathematics education and pedagogy, academic rank, mathematics specialization, license to teach in primary or secondary schools, beliefs)
- Future Teacher Background and Characteristics (e.g., age at time of graduation, gender, self reported summative achievement in secondary school, resources as indicators of socioeconomic status and social capital, level of education in the family, beliefs)

## Institutions

## Which institutional requirements do primary future

 teachers have to meet to successfully complete program?
## Table 4.11 Institutional requirements that future primary teachers have to meet to

 successfully complete their program (j =yes; $0=n o$ )| Program Group | Country | Passing grade on all subjects | Pass a comprehensive written examination | Pass a comprehensive oral examination | Pass a national or state examination | Pass an examination set by program | Write <br> and defend a thesis | Level of teaching competence in a classroom | Passing grade on field experience |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

# Highlights from analysis of future teachers' mathematics and pedagogical knowledge [Chapter 6] 

## Assessment Framework for Mathematics Content Knowledge

Content domains:

- Numbers and operations
- Geometry and measurement
- Algebra and functions
- Data and chance

Cognitive domains:

- Knowing
- Applying
- Reasoning

Curricular level

- School mathematics
- University mathematics

## $+$

# Assessment Framework for Mathematics Pedagogical Content Knowledge 

Content domains:

- Numbers and operations
- Geometry and measurement
- Algebra and functions
- Data and chance

Pedagogical domains:

- Curriculum
- Planning
- Enacting

## $+$

Instrument Design \& Question Types

- Future Primary Teachers Assessment
- 70 questions distributed across 5 blocks (2b/p)
- About 2/3 MCK; 1/3 MPCK
- Future Secondary Teachers Assessment
- 49 questions distributed across 3 blocks (2b/p)
- About 2/3 MCK; 1/3 MPCK
- Questions types:

Multiple choice; complex multiple choice; constructed response

## Reporting Results for MCK and MPCK

- Separate scales for MCK and MPCK for both Primary \& Secondary future teachers
- IRT scores scaled to have international mean of 500; standard deviation of 100
- Descriptive statistics and distributions reported by program group and country
- Anchor Points used to give conceptual meaning to selected MCK and MPCK scores

## Determining Anchor Points for Scales

- Items chosen to determine anchor points were selected based on location on IRT theta scale from calibration results for the whole study sample
- This is a different procedure than that used by TIMSS and PISA, because populations of future teachers are much smaller than populations of pupils

## Procedures for Developing Anchor Point Descriptions

- Two Anchor Points (APs) selected for each MCK scale; one AP for each MPCK scale
- Number of APs determined by distribution of items along theta scale
- Content experts given two sets of items for each AP to write descriptions
- Those answered correctly with probability $\geq 0.70$
- Those answered correctly with probability $\leq 0.50$

$$
+\div
$$

## Primary MCK: Excerpt from Lower Anchor Point Description (AP1 score = 431)

Likely to answer correctly questions requiring:

- basic computations with whole numbers in simple problem solving situations
- understanding properties of operations with whole numbers
- solving some problems with fractions
- solving problems involving simple expressions and equations

Have difficulty with questions requiring:

- solving abstract problems and those requiring multiple steps
- understanding the number line, and the infinity of numbers between any two real numbers
- knowledge of proportionality and multiplicative reasoning
- reasoning about multiple statements and relationships among several mathematical concepts

## Fig. 6.1 Primary Complex Multiple Choice MCK Question about Number

Int. average (key):
A. 81 \% (F), B. $86 \%$ (F), C. $92 \%$ (T), D. $64 \%$ (F)

Indicate whether each of the following statements is true for the set of all whole numbers $a, b$ and $c$ greater than zero.

Check one box in each row.

True
Not True
A. $a-b=b-a$
B. $a \div b=b \div a$
C. $(a+b)+c=a+(b+c)$
D. $(a-b)-c=a-(b-c)$

## Primary MCK: Excerpt from Upper Anchor Point Description (AP2 score = 516)

Likely to answer questions correctly requiring:

- the mathematics that future teachers at Anchor Point 1 are likely to get correct, AND:
- using fractions to solve story problems
- knowing how to find the least common multiple of two numbers in a familiar context
- determining areas and perimeters of simple figures

Have difficulty with questions requiring:

- solving problems involving proportional reasoning or percentages
- reasoning about factors and multiples
- solving problems about area involving coordinate geometry
- recognizing applications of quadratic or exponential functions, and algebraic reasoning

## Fig. 6.2 Primary Multiple Choice MCK Item about Geometry <br> Int. average (key): $60 \%$ (A)

The area of each small square is $1 \mathrm{~cm}^{2}$.

What is the area of the shaded triangle in $\mathrm{cm}^{2}$ ?
Check one box.

| A. | $3.5 \mathrm{~cm}^{2}$ |
| :--- | :--- |
| B. | $4 \mathrm{~cm}^{2}$ |
| C. | $4.5 \mathrm{~cm}^{2}$ |
| D. | $5 \mathrm{~cm}^{2}$ |

(Future Primary Teachers)

## Fig. 6.6 Constructed Response Primary MPCK Item about Enacting Number Int. average:

(a) full credit $20 \%$, partial credit $12 \%$
(b) full credit $16 \%$, partial credit $16 \%$
[Jeremy] notices that when he enters $0.2 \times 6$ into a calculator his answer is smaller than 6 , and when he enters $6 \div 0.2$ he gets a number greater than 6 . He is puzzled by this, and asks his teacher for a new calculator!
(a) What is [Jeremy's] most likely misconception?
(b) Draw a visual representation that the teacher could use to model $0.2 \times 6$ to help [Jeremy] understand WHY the answer is what it is?
+

IEA Teacher Education Study in Mathematics

# Highlights About Opportunities to Learn and Future Teachers' Beliefs 

[Chapters 4 \& 6]

## Reporting OTL \& Beliefs

- OTL and Beliefs Scales (IRT)
- Scales are centered at 10.0
- Indicating the "midpoint" of the rating scale
- Perceptions: Agree to Disagree
- Frequencies: Never to Often
- OTL Domains Studied
- Original Metric: Number of Areas Studied $+\div$

Opportunities to Learn Mathematics and Pedagogy

- University level mathematics
- School mathematics
- Mathematics education/pedagogy
- Education/pedagogy

Other opportunities to learn to teach:

- How to teach in diverse classrooms
- Learning from school experience and the practicum

## Opportunity to Learn Domains University Level Mathematics

- Continuity and functions (e.g., beginning calculus, calculus, multivariate calculus, advanced calculus or real analysis, and differential equations);
- Discrete structures and logic (e.g., linear algebra, set theory, abstract algebra, number theory discrete mathematics, and mathematical logic);
- Geometry (e.g., foundations of geometry or axiomatic geometry, analytic or coordinate geometry, nonEuclidean geometry, and differential geometry);
- Probability and statistics (e.g., probability and theoretical or applied statistics).

## Opportunity to Learn Domains School Mathematics

- Numbers (e.g., whole numbers, fractions, decimals, integers, rational, and real numbers; number concepts; number theory; estimation; ratio and proportionality)
- Measurement (e.g., measurement units; computations and properties of length, perimeter, area, and volume; estimation and error)
- Geometry (e.g., 1-D and 2-D coordinate geometry, Euclidean geometry, transformational geometry, congruence and similarity, constructions with straightedge and compass, 3-D geometry, vector geometry);

## Opportunity to Learn Domains School Mathematics (cont.)

- Data representation, probability, and statistics;
- Calculus (e.g., infinite processes, change, differentiation, integration); and
- Functions, relations, and equations (e.g., algebra, trigonometry, analytic geometry);
- Validation, structuring and abstracting (e.g., Boolean algebra, mathematical induction, logical connectives, sets, groups, fields, linear space, isomorphism, homomorphism).

## UNIVERSITY LEVEL MATHEMATICS

1. Consider the following topics in university level mathematics. Please indicate whether you have ever studied each topic.

Check one box in each row.

## Studied Not studied

$\square$ $\square_{2}$ $\square_{1}$
Linear Algebra (e.g., vector spaces, matrices, dimensions, eigenvalues, eigenvectors)

Number Theory (e.g., divisibility, prime numbers, structuring integers)

Analytic/Coordinate Geometry (e.g., equations of lines, curves, conic sections, rigid transformations or isometrics)

Beginning Calculus Topics (e.g., limits, series, sequences)

Calculus (e.g., derivatives and integrals)

Probability

Theoretical or Applied Statistics
$\square_{1}$
$\square_{2}$

## SCHOOL LEVEL MATHEMATICS

2. Consider the following list of mathematics topics that are often taught at the <primary> or <secondary> school level. Please indicate whether you have studied each topic as part of your current teacher preparation program.

Numbers (e.g., whole numbers, fractions, decimals, integer, rational, and real numbers; number concepts; number theory; estimation; ratio and proportionality)

Measurement (e.g., measurement units; computations and properties of length, perimeter, area, and volume; estimation and error)

Geometry (e.g., 1-D and 2-D coordinate geometry, Euclidean geometry, transformational geometry, congruence and similarity, constructions with straightedge and compass, 3-D geometry, vector geometry)

Functions, Relations, and Equations (e.g., algebra, trigonometry, analytic geometry)

Data Representation, Probability, and Statistics

Calculus (e.g., infinite processes, change, differentiation, integration)

Validation, Structuring, and Abstracting (e.g., Boolean algebra, mathematical induction, logical connectives, sets, groups, fields, linear space, isomorphism, homomorphism)

## Studied Not studied

 $\square_{1}$ $\square_{2}$ $\square_{2}$$\square_{1}$
$\square$ $\square_{2}$$\square_{2}$

## Secondary future teachers: Percentage reporting ever studying domains in university level mathematics

| Group |  | Linear Algebra | Analytic Geometry | Calculus | Probability | Statistics |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Lower Secondary (Gde 10 Max) |  |  |  |  |  |  |

## Beliefs about Mathematics, Teaching and Learning

- Nature of Mathematics
- Mathematics as a Process of Inquiry
- Mathematics as a Set of Rules and Procedures
- Learning Mathematics
- Mathematics Achievement
- Preparedness to Teach Mathematics
- Program Effectiveness \& Coherence x

## BELIEFS ABOUT THE NATURE OF MATHEMATICS

1. 

To what extent do you agree or disagree with the following beliefs about the nature of mathematics?
Check one box in each row.

A. Mathematics is a collection of rules and procedures that $\begin{array}{llllll}\square_{1} & \square_{2} & \square_{3} & \square_{4} & \square_{5} & \square_{6}\end{array}$ prescribe how to solve a problem.
B. Mathematics involves the remembering and application of definitions, formulas, mathematical facts and procedures.
C. Mathematics involves creativity and new ideas.
$\begin{array}{llllll}\square_{1} & \square_{2} & \square_{3} & \square_{4} & \square_{5} & \square_{6}\end{array}$
D. In mathematics many things can be discovered and tried out by $\begin{array}{llllllll}\square_{1} & \square_{2} & \square_{3} & \square_{4} & \square_{5} & \square_{6}\end{array}$ oneself.
E. When solving mathematical tasks you need to know the correct $\begin{array}{lllllll}\square_{1} & \square_{2} & \square_{3} & \square_{4} & \square_{5} & \square_{6}\end{array}$ procedure else you would be lost.
F. If you engage in mathematical tasks, you can discover new things (e.g., connections, rules, concepts).
G. Fundamental to mathematics is its logical rigor and preciseness.
$\square_{1} \quad \square_{2} \quad \square_{3} \quad \square_{4} \quad \square_{5} \quad \square_{6}$
$\begin{array}{llllll}\square_{1} & \square_{2} & \square_{3} & \square_{4} & \square_{5} & \square_{6}\end{array}$
H. Mathematical problems can be solved correctly in many ways.
$\begin{array}{llllll}\square_{1} & \square_{2} & \square_{3} & \square_{4} & \square_{5} & \square_{6}\end{array}$

## Mathematics as a Set of Rules and Procedures

| Program Group | Country | N | Mean | Standard Error | \% Missing |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Lower Primary (Grade 4 maximum) | Georgia | 490 | 11.00 | 0.09 | 3.1 |
|  | Germany | 886 | 10.09 | 0.06 | 3.1 |

|  | Thailand | 653 | 11.86 | 0.05 | 1.1 |
|  | USA ${ }^{\text {d }}$ | 144 | 11.01 | 0.14 | 25.6 |

## In short...

In explaining our conclusions we have emphasized both similarities and differences in context ...

Pre-service teachers' knowledge and OTL varied according to:

- the grade levels they were expected to teach,
- the specialty [generalist teachers or specialist teachers of mathematics]

## MCK And MPCK

- The difference in mean MCK or MPCK scores between the highest and lowest achieving country in each program group was between one and two standard deviations.
- In the highest achieving countries within each program group, the majority of future teachers had scores at or above the higher MCK anchor point. X

## Opportunities to Learn

- Concentration of primary level OTL on the basics of numbers and measurement
- Concentration of university level OTL (with the exception of statistics) mostly in programs that prepare upper secondary school teachers
- Opportunities to learn general pedagogy and to engage in field experiences were universally available but their duration and nature varied greatly among countries and/or program-types

## Annotations Institutional Program Questionnaire Data *

```
This table must be read with awareness of the limitations reported in the annotations. These annotations refer to the data footnoted in the tables below.
Notes
j = Yes; O = No
Annotations (Institutional Program)*:
The shaded areas identify data that, for reasons explained in the footnotes below, cannot be compared with confidence to data from other countries.
a. Poland: Institutions with consecutive programs only were not covered.
b. Russian Federation: Secondary pedagogical institutions were not covered.
c. Chinese Taipei: Exclusion rate >5% (see Technical Report).
d. Philippines: Exclusion rate >5% (see Technical Report).
e. Oman: Oman provided only secondary education at the time of testing.
```

* Germany did not authorize reporting institutions

## Annotations Educator Questionnaire Data *

This table must be read with awareness of the limitations reported in the annotations. These annotations refer to the data footnoted in the table below. The shaded areas identify data that, for reasons explained in the footnotes below, cannot be compared with confidence to data from other countries Notes
a. Oman: Oman provided only secondary education at the time of testing.
b. Poland: Combined participation rate between $60 \%$ and $75 \%$ only; Institutions with consecutive programs only were not covered.
c. Russian Federation: Secondary pedagogical institutions were not covered.
*Participation rates clearly below standard in Germany, Chile, Malaysia and Switzerland; data was excluded in these comparative tables.
**Unacceptable data were from Canada, Norway and the United States of America.

## Annotations Primary Future Teacher Questionnaire Data (MCK, MPCK, Beliefs)

#### Abstract

Annotations (Primary Future Teacher data) Notes The shaded areas identify data that, for reasons explained in the footnotes below should be interpreted with caution. The charts are Box and whisker plots (Tukey, 1977) showing the median, the upper and lower quartiles, and the maximum and minimum values. For ease of interpretation, statistical outliers (defined as data points more than 1.5 box widths above or below each box) are not shown.

a. Poland: Reduced coverage: institutions with consecutive programs only were not covered. Combined participation rate between 60 and $75 \%$.
b. Russian Federation: Reduced coverage: secondary pedagogical institutions were excluded.
c. Switzerland: Reduced coverage: the population covered includes only institutions where German is the primary language of use and instruction.
d. USA: Reduced coverage: public institutions only. Combined participation rate between $60 \%$ and $75 \%$. An exception was made to accept data from two institutions because, in each case, one additional participant would have brought the response rate above the $50 \%$ threshold. Although the participation rate for the complete sample meets the required standard, the data contain records that were completed using a telephone interview, when circumstances did not allow administration of the full questionnaire. Of the 1501 recorded as participants, the full questionnaire was administered to 1185 , of whom the number providing sufficient data to receive scores on the achievement and beliefs measures ranged from 1083 to 1149. Bias may arise in the data because significant numbers of individuals were not administered the full questionnaire.
e. Botswana: The sample size is small $(N=86)$, but arises from a census of a small population. f. Chile: Combined participation rate between $60 \%$ and $75 \%$.
g. Norway: Combined participation rate between $60 \%$ and $75 \%$. An exception was made to accept data from one institution because one additional participant would have brought the response rate above the $50 \%$ threshold. Program types ALU and ALU+ are reported separately because the two populations partly overlap; data from these program types cannot be aggregated.

## Annotations Secondary Future Teacher Questionnaire Data (MCK, MPCK, Beliefs)* <br> Annotations (Secondary Future Teacher data) Notes The shaded areas identify data that, for reasons

 explained in the footnotes below, cannot be compared with confidence to data from other countries.The charts are Box and whisker plots (Tukey, 1977) showing the median, the upper and lower quartiles, and the maximum and minimum values. For ease of interpretation, statistical outliers (defined as data points more than 1.5 box widths above or below each box) are not shown.
a. Botswana: The sample size is small $(\mathrm{N}=53)$, but arises from a census of a small population.
b. Chile: Combined participation rate between 60 and $75 \%$.
c. Poland: Reduced coverage: institutions with consecutive programs only were not covered. Combined participation rate between 60 and $75 \%$.
d. Switzerland: Reduced coverage: includes only institutions where German is the primary language of use and instruction
e. Norway: Combined participation rate 58\%. An exception was made to accept data from one institution because one additional participant would have brought the response rate above the $50 \%$ threshold. For the programs that prepare to grade 10 maximum, program types ALU and ALU+ are reported separately because the two populations partly overlap; data from these program types cannot be aggregated.
f. USA: Reduced coverage: public institutions only. Combined participation rate between $60 \%$ and $75 \%$. An exception was made to accept data from one institution because one additional participant would have brought the response rate above the $50 \%$ threshold. Although the participation rate for the complete sample meets the required standards, the data contain records that were completed using a telephone interview, when circumstances did not allow administration of the full questionnaire. Of the 607 recorded as participants, the full questionnaire was administered to 502 , of whom the number providing sufficient data to receive scores on the achievement and beliefs measures ranged from 441 to 490 . Bias may arise in the data because significant numbers of individuals were not administered the full questionnaire.
g. Georgia: Combined participation rate between 60 and $75 \%$. An exception was made to accept data from two institutions because, in each case, one additional participant would have brought the response rate above the $50 \%$ threshold.
h. Russian Federation: An unknown number of those surveyed had previously qualified to become primary teachers.

## Primary Anchor Points on Item Map*

Persons indicated on the left and items on the right.

Red x's are at AP1

Red "numbers" indicate items with greater than .70 probability of correct response for those at AP1.

Yellow X's and numbers indicate AP2 and corresponding items.
